

Analytics

AMT BI is an analytics tool that provides actionable insights and reporting to users in sales, production, finance and supply chain management. Through its simple dashboards, users can visualize, analyze data and understand what's happening in real time.

Advantages

Speed. Users can make quicker, easier and faster decisions using pre-built graphs and charts. This approach delivers more accurate results for each product, supplier and customer by optimizing inventory and controlling costs.

Data driven. You can use the tool to analyze what happened, why and how and easily adjust business plans, make forecasts and improve customer interactions. Adapt to market demands and run what if scenarios.

Pre-built dashboards. We deliver a range of pre built visualizations that can help you identify trends and patterns in the business. Create accurate forecasts and avoid shortages.

Integrated. It is seamlessly integrated with AMT ERP data and can be extended.

Key use cases

- ✔ Sales and operations planning
- ✔ Demand planning
- ✔ Supply planning
- ✔ Operations planning
- ✔ Budgeting and accounts receivable analysis
- ✔ Cross profit and margin analysis for dilution and royalty

Standard reporting

We provide a real time operational reporting solution designed specifically for end users.

- ✔ Easy access to interactive reports and various levels of data critical to your business performance
- ✔ Administration of report scheduling, distribution and delivery
- ✔ Extensive library of 1,000+ pre-defined reports
- ✔ Additional reports can be built using the SQL report writer
