Our fully integrated web-based **ERP** system, is designed for manufacturers and importers, digitizes and automates your core business processes to help you grow and improve business results. This intuitive software solution is designed to support mixed mode and make to order manufacturers. AMT provides seamless integration and automation from quote to cash.

Sales Order Processing, Supply Chain, Production, Inventory, Logistics, Financials, Analytics and Reporting, Customer Management, Electronic Data Interchange (EDI)

How you benefit

Reduce costs

The software is designed to scale with your business enabling you to replace outdated systems and automate manual processes.

Streamline operations

Reduce lead times and delays in delivery by aligning current business processes and the flow of information using lean principles.

Bring new products to market faster

Modernize sourcing programs and production systems to support new product launches.

Software that grows with you

The modular design of our software enables you to stay current on the software and makes it easy to add new features and enhancements to meet future business requirements.

AMT functionality includes:

- Maintaining contact details for suppliers and customers
- Managing production jobs through ordering, costing to fulfillment
- Controlling inventory and shipment
- Analysis of profitability and gross margins for customer, orders, items and products

It runs on modern desktops which makes it easy to use and offers integration with document tools and everyday email programs. You can quickly configure the software to meet unique business requirements including allowing you to add fields and make mass updates making it easy for users to find what they are looking for. Complete with a library of over 500 reports that support data drilling and a comprehensive report generator.
